Creating a user journey is a quick way to help you and your team gain a deeper understanding of who you're designing for, aka the stakeholder in your project. The information you add here should be representative of the observations and research you've done about your users.  $\wp$ 

1 Phases  High-level steps your user needs to accomplish from start to finish	Create an account for the user	Set the financial details of the user	Track the amount of money spent by the user	Attach the phone number / Mail to get the alert
2 Steps  Detailed actions your user has to perform	Analyzing the reports at regular intervals to get a sense of where their money is going.	Creating expense categories	Keeping track of daily expenses	
Feelings What your user might be thinking and feeling at the moment	Easy to create the account	I can keep track of it	Avoid unnecessary expenses	
	Is that secure?	Not so simple	Keeping track is much more difficult
